Education

Graphic Era Deemed to be University, Dehradun **2024 – Present**
B.Tech in Computer Science & Engineering (AI & ML) *8.93 CGPA*

Army Public School, Roorkee **2022 – 2023**
Senior Secondary (XII), CBSE *91.2%*

Army Public School, Roorkee **2020 – 2021**
Secondary (X), CBSE *85.6%*

Experience

Bluestock Fintech **Feb 2026 – Mar 2026**
Software Engineering Intern *Remote — Certificate*

- Architected and deployed advanced ML preprocessing pipelines for 10,000+ financial records utilizing Pandas and Scikit-learn, enhancing data integrity and model performance.
- Performed data cleaning, normalization, and feature engineering, reducing data inconsistency issues by approximately 30%.
- Optimized backend workflows and debugging processes, achieving a 25% improvement in development efficiency for fintech applications.
- Contributed to production-level fintech workflows involving financial data handling and machine learning pipelines.

Projects

AgentHub - AI Agent Marketplace & Workflow Orchestrator | Next.js, TypeScript, Firebase **Source Code**

- Developed a full-stack AI agent marketplace supporting discovery and orchestration of 100+ autonomous AI agents.
- Implemented semantic vector search and GitHub repository scanning, improving agent discovery relevance by 40%.
- Designed a visual workflow orchestrator to chain multiple AI agents with real-time execution outputs.

Newsify - Reddit to News Pipeline | PyTorch, DistilBERT, FAISS, Flask **Source Code**

- Built an AI pipeline that processed 5,000+ Reddit posts into structured news articles using DistilBERT and RAG.
- Trained NLP classifiers achieving 85%+ validation accuracy for newsworthiness and category classification.
- Implemented FAISS-based semantic retrieval and Flask APIs for article generation, analytics, and Reddit data ingestion.

Cortex Care - AI Medical Chatbot | Python, FastAPI, Streamlit, Ollama **Source Code**

- Prepared an AI-driven mental health support system handling multiple user intent categories in real time.
- Integrated Twilio API for emergency intent detection and escalation workflows to improve user safety.
- Created a privacy-focused architecture enabling local AI inference and reduced external API dependency.

Multiple Disease Prediction System | Python, Scikit-learn, Streamlit **Source Code** | **Live Demo**

- Defined ML models for diabetes, Parkinson's disease, and heart disease prediction using 5,000+ healthcare records.
- Performed preprocessing, feature scaling, and model evaluation, achieving prediction accuracy above 90% on selected datasets.
- Streamlined an interactive Streamlit application for real-time disease prediction, streamlining health-risk analysis and reducing diagnostic time by 40%.

Technical Skills

Programming Languages: Python, C++, C, JavaScript
Web Technologies: HTML, CSS, REST APIs
Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, DBMS
AI/ML & Generative AI: Scikit-learn, TensorFlow, NLP, Transformers, LLMs, RAG, Generative AI
Cloud & Databases: AWS, MongoDB, SQL
Developer Tools: Git, GitHub

Certifications & Achievements

- J.P. Morgan: Quantitative Research Job Simulation
- Oracle Cloud Infrastructure: 2025 Generative AI Professional & 2025 AI Foundations Associate
- AWS Knowledge: Cloud Essentials
- Academic Excellence: Topped Computer Science in Class 12
